

Andrew Joros

2215 Raggio Pkwy, Reno, NV 89512 | andrew.joros@dri.edu

SUMMARY

Research computing engineer who builds production-grade data and analytics systems from ingestion to decision-ready delivery. I develop reproducible pipelines, APIs, and interactive applications that turn complex datasets into reliable, actionable insights for technical and non-technical stakeholders.

EXPERIENCE

- | | |
|---|----------------------------|
| Research Computing Engineer (Software Development / Data Scientist)
<i>Division of Atmospheric Science / Division of Hydrologic Sciences, Desert Research Institute</i> | 2024 – Current
Reno, NV |
| <ul style="list-style-type: none">• Contributed to predictive analytics workflows by testing model consistency, evaluating clustering strategies, and automating preprocessing for reliable downstream analysis• Built an OpenFOAM post-processing pipeline that converts large CFD snow-transport outputs into analysis-ready datasets and wall-shear-stress diagnostics• Operate an automated snow-drought dashboard pipeline that ingests SNOTEL data and generates HUC-level and station-level drought classification graphics• Developed a Flask/xarray climate-risk API and interactive web maps serving long-horizon county heat and energy indicators• Automated Nevada groundwater-use and projected pumpage reporting across 262 hydrographic basins to support county water-planning deliverables• Architected a public snowpack-runoff decision-support tool combining a Leaflet/Plotly web interface with automated SNOTEL/CDEC ingestion and JSON processing pipelines to deliver faster, clearer real-time watershed conditions | |
| Research Computing Engineer (Cloud Computing / Data Scientist)
<i>Center for Genomic Medicine & Climate Ecosystem Fire Applications, Desert Research Institute</i> | 2019 – 2023
Reno, NV |
| <ul style="list-style-type: none">• Provided cloud computing and data engineering support for genetic analysis projects• Worked with team members on cloud-based data engineering and statistical projects, improving productivity• Led AWS onboarding and training, enhancing the team's cloud computing skills• Created AWS-based solutions for statistical smoke dispersion models for California's fire management• Developed a dynamic front-end webpage using AWS, presenting statistical modeling outputs related to Interagency Wildland Fire Air Quality, empowering stakeholders with valuable insights into air quality conditions | |
| Staff Research Scientist (Software Development / Data Scientist)
<i>Applied Innovation Center, Desert Research Institute</i> | 2016 – 2019
Reno, NV |
| <ul style="list-style-type: none">• Developed water surveying software for groundwater assessment using vertical electrical sounding, enhancing well siting and drilling• Contributed to the construction of meteorological and air pollutant data pipeline, aiding environmental research for the Healthy Nevada Project• Integrated Christopher Ranch's sensor data into AWS for storage and machine learning use• Leveraged AWS EC2 to devise and implement cutting-edge agricultural insect and disease probabilistic models, empowering customers with accurate predictions for effective pest management and crop protection• Created an automated AWS sensor alert system for data integrity and reliability | |
| Assistant Research Scientist (High Performance Computing)
<i>Applied Innovation Center, Desert Research Institute</i> | 2015 – 2016
Reno, NV |
| <ul style="list-style-type: none">• Constructed backend data architecture for the WINDS platform, improving weather data processing and decision support• Developed a web portal for NDOT, enabling engineers to access and analyze traffic data for transportation planning• Led NevCAN's data visualization project, presenting real-time climate and ecological data effectively• Created an image processing algorithm for greenhouse experiments to analyze vegetation health and growth | |
| Staff Scientist Programmer, Hydrometeorologist
<i>Desert Research Institute</i> | 2013 – 2015
Reno, NV |

- Used Earth Engine JavaScript API for geospatial data analysis in hydrometeorology
- Contributed to the Climate and Integrated Earth Monitoring Engine dashboard, enhancing environmental data visualization
- Processed Landsat and weather data via cloud computing, aiding Nevada's ecosystem analysis and conservation
- Evaluated precipitation datasets against Texas weather stations to improve irrigation and water management

Research Assistant

2009 – 2013

Desert Research Institute

Reno, NV

- Investigated monsoonal surges in the Northern Great Basin using statistical and dynamic methods
- Improved weather datasets to better represent irrigated agricultural environments
- Worked with CEFA to create a RAWS network density plot, aiding land managers' decisions
- Developed web frameworks for NOAA-funded drought monitoring and an El Nino climate risk project

Statistical Analyst

Summer 2009

Atmospheric Systems Corporation

Valencia, CA

- Conducted statistical quality assurance and quality control (QA/QC) of output data from Sonic Detection and Ranging (SODAR) systems

EDUCATION

University of Nevada

Reno, NV

M.S. in Atmospheric Science

2009 – 2011

San Jose State University

San Jose, CA

B.S. in Meteorology

2006 – 2009

SKILLS

Programming Languages: Python, MATLAB, R, Java, C/C++, FORTRAN, Scala

Software Frameworks: Apache Hadoop, Apache Spark, Cloudera CDH, ArcGIS

Web Design (Frontend): HTML5, CSS, Adobe Creative Suite, JavaScript, Highcharts

Web Design (Backend): PHP, MySQL, Flask, Django, XAMPP

Cloud Platforms: Amazon Web Services, Google Cloud Platform, Azure

Operating Systems: Linux (Ubuntu/CentOS/Redhat), Windows

PUBLICATIONS AND REPORTS

1. Yu, G., Miller, J. J., Mejia, J. F., Rasouli, K., McCarthy, M. I., Joros, A. N., O'Shea, K. (2026). Updating the Probable Maximum Precipitation for Nevada. Damon, N. E. (ed.), Division of Hydrologic Sciences, Desert Research Institute: Nevada Division of Water Resources, June 30, 2025, DHS publication #41312.
